

Stop Infestation

Healthy turf will withstand disease and recover faster than neglected turf. Here are some guides for healthy turf:

1. Use enough fertilizer to keep grass growing vigorously - but avoid the extreme of over stimulation.
2. Mow before the grass gets too tall. Don't cut more than 1/3 of the total grass height off at a time.
3. Cut no more than one inch of the leaf surface at any one time.
4. Keep your mower sharp.
5. Don't allow clippings to accumulate to the extent that they form a mat.
6. Remove thatch as required.
7. Avoid frequent waterings which tend to keep the grass wet.

**Black
Garden
Soil**

BigYellowBag® Black Garden Soil consists of Black Loam, Peat Loam, well-composted Manure and a touch of mineral soil for stability. It is great for topping up any type of garden, be it vegetable gardens or flowerbeds and also for over-seeding your lawn.

Tip: We suggest mixing the Black Garden Soil with your existing soil to allow both air and water nutrients to percolate in and out. You can then put straight Black Garden Soil on top for aesthetics
