

## TOP DRESSING MIX

BigYellowBag®'s Top Dressing Mix is a high quality mixture of peat and specialty sand blended together at the perfect ratio to provide excellent growth to existing turf and lawns.

Originally developed for architects, golf courses and landscapers, our high quality Top Dressing Mix is now available to homeowners.

Spread top dressing over lawn to a depth of ¼ to ½ inch. Brush the top dressing mix into the grass with a broom or a rake. The object is to get as much top dressing mix into the thatch layer so the grass blades are exposed and not smothered.

### Why Top Dress Your Lawn?

The sandy texture of our high grade TOP DRESS mix is designed to improve water, air and nutrient movement into the soil (infiltration) and within your lawns root-zone (percolation). The organic component of the soil carries micro-organisms who produce and carry key nutrients into the soil.

Top dressing aids in creating natural organic food for your lawn through microbial activity. By raking or sweeping the Top Dress mix into the thatch layer, it speeds up the process of allowing micro-organisms to feed on that rich thatch layer then carry key nutrients like nitrogen, phosphate and potash back into the soil, for a healthy lawn.

Optional over-seeding may also be combined to thicken up the bare areas.

### APPLICATION GUIDELINES

- 1 Bag covers 1300 to 2000 sq ft

BigYellowBag.com (905) 389-1315

Available in original size BigYellowBag® - 1 cubic yard
